

Meeting Minutes (November 17, 2024)

Format: Online via Discord

Date: November 17, 2024

Duration: 9:00 pm - 9:20 pm (20 mins.)

Attendees: Jason, Kate, Gabby

I. Discussed Items

- Discussed the completion of the closet UI, and the integration of SQL to replace placeholders in the UI panel.
 - Gabby completed the closet UI
 - Kate will integrate the SQL JDBC connection in order for the code to work
- Discussed the visualization of data.
 - Jason has successfully created test data visualization graphs.
 - Once the closet is integrated into the database, the graphs will reflect the user's closet rather than the test cases.
- Discussed the forum UI and integration of the database in the forum.
 - Kate has completed the basic forum UI, though she still needs to make some small changes in the future to reflect the same design as Gabby's closet UI.
 - Kate has successfully integrated the forum UI with the database via forumPost object and forumPostDAO.
 - Still needs to make the edit and delete options.
- Discussed rewriting our code to reflect our UML system structure diagram
 - Kate has already used a DAO for forum, and will need to refactor some code to reflect the MVC pattern soon.

II. Users Stories Selected for Current Sprint

- As a user, I would like a closet feature where I can add, delete, and edit my clothing information.
- As a user who wants to interact with the sustainability community, I would like a forum system where I can add, delete, and edit my forum posts.
- As a user, I would like to know about the sustainability ratings of clothing brands and types of materials through the dashboard so I can consider my clothing habits.

- As a user who is conscious about sustainability, I would like to see the numbers and percentages of my carbon footprint so that I am aware of my environmental impact.

III. Users Stories Completed Overall

- As a new user, I would like to be able to add clothes via a form layout so that the information is clean and clear.
- As a user, I would like to be able to use a navigation bar so that I can easily navigate and access through each core functionalities of the application.
- As a user, I would like to be able to scroll through a page that contains a lot of information so that all the information is not cramped and hard to read.
- As a user who wants to access their own personal closet, I would like to register my own account using a user management system (login/signup) so that I can access my own information and so others can't access my account as well.
- As a user conscious about the privacy of my data, I would like my account to be secure through encryption so that no one can easily hack into my account.
- As a user who enjoys the design of applications, I would like to see an application with a set color, font, and layout theme and design so that it enhances my user experience.
