Meeting Minutes (November 15, 2024)

Format: In Person @ Viasat Engineering Pavillion
Date: November 15, 2024
Duration: 11:30 am - 11:40 pm (10 mins.)
Attendees: Jason, Kate, Gabby

I.   Discussed Items

- Discussed the implementation of data visualization.
  - Completed the equations to calculate different datasets
  - Discussed what data chart is best fitted for each of the dataset
    - i.e. should a bar graph or pie chart be more effective?
- Discussed linking the closet data to display into the dashboard.
  - Gabby will finish the closet interface by Monday
  - Kate will take Gabby's code and integrate it into the database so that it's prepared to work with Jason's dashboard code
- Discussed using gabby's interface design to use for forum and review pages.
  - Would have to wait for Gabby to be done with the interface.

II.   Users Stories Selected for Current Sprint

- As a user who wants to interact with the sustainability community, I would like a forum system where I can add, delete, and edit my forum posts.
- As a user, I would like a closet feature where I can add, delete, and edit my clothing information.
- As a user, I would like to know about the sustainability ratings of clothing brands and types of materials through the dashboard so I can consider my clothing habits.
- As a user who is conscious about sustainability, I would like to see the numbers and percentages of my carbon footprint so that I am aware of my environmental impact.

III.   Users Stories Completed

- As a new user, I would like to be able to add clothes via a form layout so that the information is clean and clear.
- As a user, I would like to be able to use a navigation bar so that I can easily navigate and access through each core functionalities of the application.

- As a user, I would like to be able to scroll through a page that contains a lot of information so that all the information is not cramped and hard to read.
- As a user who wants to access their own personal closet, I would like to register my own account using a user management system (login/signup) so that I can access my own information and so others can't access my account as well.
- As a user conscious about the privacy of my data, I would like my account to be secure through encryption so that no one can easily hack into my account.
- As a user who enjoys the design of applications, I would like to see an application with a set color, font, and layout theme and design so that it enhances my user experience.
